Target version:			
Description			
<p>This panic occurs when trying to read a defective SATA hard drive with ahci.</p> <p>On the same machine, when using the nata disk driver (by disabling ahci in BIOS), the disk is still unreadable with READ_DMA errors but the kernel does not panic.</p> <p>System is DragonFly 2.4.1 running on a Core 2 Duo machine with an Intel ICH9 SATA chipset.</p> <p>The mainboard is a Supermicro X7SBL-LN2: http://www.supermicro.com/products/motherboard/Xeon3000/3200/X7SBL-LN2.cfm</p> <p>gzipped kernel and core file are available here: http://www.wolfpond.org/crash.dfly/</p>
