Description			
Last time ACPI was updated, something broke the power button. It doesnt shutdown DragonFly anymore. Happens on both my workstation and laptop.

What is
sysctl hw.acpi.power_button_state
set to?

hw.acpi.power_button_state: S5

Any ideas? Im certain this started happening since the last ACPI update.

Lots of things changed during the last ACPI update. Please provide verbose dmesg, I will look into the problem this week.

Hi,

ACPI has been updated to a more consistent state, can you please try it now with latest master or release?

Cheers,
Antonio Huete
