Target version:	
Description just noticed as i was signing up for the bugs system. i signed up with my full name (Kiril Mitev) and entered km66 into the "username" field. i received a "complete your registration" email, quote: --- To complete your registration of the user "km66" with DragonFly issue tracker, please visit the following URL: --- could not login though. a password reset request later, it looks like the system took my first name from the full name as my login: --- The password has been reset for username "kiril". Your password is now: MJAXLm6G --- (i changed the password of course, thus no censoring) not a big deal of course, but if the system swaps in a username it prefers to use, please fix the emailer to report that username

AFAIK this is because you have sent mails to the bugs@ list. The bugtracker then automatically creates a username for you.

Cheers,
Alex Hornung
