Correct me if I'm wrong, but I believe marino did this already.

<http://lists.dragonflybsd.org/pipermail/commits/2014-May/270116.html>

It should be on Master. If working, I believe all that needs to be done is for it to merge into the 3.8 Release.

##### #2 - 01/14/2015 03:40 PM - tuxillo

- Status changed from *New* to *Feedback*

- Target version changed from *3.8.0* to *4.2.x*

Hi all,

If I recall correctly there was some ongoing discussion on whether both tools should be updated in the tree or removed from it in favor of the dports versions.

Does anybody have more information about it?

Best regards,  
Antonio Huete

HostAP was removed from base. WPA-suppicant is still in base but needs an update.
