

DragonFlyBSD - Bug #1314

NFS /etc/exports: -public flag results in kernel panic

Description	
Hi,	
It's reproducible. I've a simple /etc/exports file like this:	
<pre>/data -alldirs -public</pre>	
It gives a kernel panic (lockmgr) when NFS is started.	
Without -public it works.	
Regards,	
Michael	

History

This is the trace for the panic.

#2 - 08/25/2009 06:24 AM - tuxillo

Let me give this a try.

#3 - 08/25/2009 07:44 PM - tuxillo

Michael,

Have you tried this with HAMMER and null-mounted PFSS?
Can you please try with UFS?

I've tried with UFS on a vkernel without problems.
