

DragonFlyBSD - Bug #1811

Machine hangs with recent code

08/29/2010 03:09 PM - polachok

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version:	
Description Hi. I updated sources today and can't boot any more (it hangs at "Finish MP startup"). I attach serial log with newer kernel (top) and older one (on the bottom).	

History

#1 - 08/29/2010 03:31 PM - alexh

This is a known issue being worked on. It's due to using tokens before ap_finish() is called. Temporarily workaround is disabling comconsole in the loader.

This should be fixed by commit 5688255a2465ea75743dbf7967ff76164c91aeefe.

There may still be some issues. I'm working through tests with both the video console and the serial console. It should be working again in an hour or so hopefully.

#5 - 08/29/2010 10:26 PM - dillon

Ok, the lockup issues with the console kprintf and keyboard should ALL be solved now. Everything should be working, including USB keyboards from the debugger/panic, for both ohci and ehci.
