Target version:			
Description			
<p>I have trouble when let the installer configure the timezone for me, the system just not calculated the GMT-3 of my local time (machine clock setup to UTC).</p> <p>This issue disapears when seting up DNTPD with local ntp servers.</p> <p>To test a bit more (this and others issues), I have reinstalled the system and do not let the installer to configure anything but the root password. And it worked! tzsetup worked very well, the system was able to calculate the GMT-3.</p> <p>The installation medium was pendrive with amd64 compilation of dfly 3.0.2.</p>
