| <b>Description</b>  |     |                        |            |
| Hi,   |     |                        |            |
| I'm working on porting Burp ( <a href="http://burp.grke.org">http://burp.grke.org</a> ) to DragonFly.   |     |                        |            |
| I've been looking into what it would take for it to support backing up extended attributes.   |     |                        |            |
| Burp uses the extattr_namespace_to_string and extattr_string_to_namespace functions, which FreeBSD has in libutil.h and NetBSD in sys/extattr.h. DragonFlyBSD misses those however. |     |                        |            |
| Would it be possible to add those functions?  |     |                        |            |
