Target version:			
Description			
DragonFlyBSD 5.0.2 with Hammer2 with UEFI install doesn't boot FATAL: Could not read from the boot medium! System halted. Legacy BIOS install is OK. Looks like that the boot installer isn't run.

Is the box itself also set to UEFI mode?

Any feedback or more info about this issue? Otherwise, I'd like to close this bug later.

By the way, DragonFly BSD works well with UEFI (on real machines or VirtualBox or VMWare).
