**Description**

Hi,

I want to install x11/xorg but it gives error.

I also get same error when I wanted to install python port.

```
make: "/usr/dports/Mk/Uses/python.mk" line 486: Cannot open /usr/dports/lang/python38/Makefile.version
make: Fatal errors encountered -- cannot continue
make: stopped in /usr/dports/devel/llvm80
```

- Error code 1

Stop.

Hello,

It seems that you have an issue with lang/python38 rather than xorg port itself.

Concerning Xorg, is there anything specific that requires you to build it? You can install it in a simple way using the pre-built binary packages provided by several mirrors as stated [https://www.dragonflybsd.org/docs/handbook/X/](https://www.dragonflybsd.org/docs/handbook/X/).

For example running "pkg install xorg" is enough to install it.
