Description
Since upgrading to 5.8, my wifi occasionally drops out, and `doas service netif restart` does not bring it back. A reboot does though

I've tried it with each of:
```
# wpa_supplicant_program="/usr/sbin/wpa_supplicant"
# wpa_supplicant_program="/raven/sbin/wpa_supplicant"
wpa_supplicant_program="/usr/local/sbin/wpa_supplicant"
```

`doas service netif restart`:
```
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: iwm_start_fw: Unable to init nic
iwm0: iwm_start_fw: failed 16
iwm0: Failed to start INIT ucode: 16
iwm_run_init_ucode: failed 16
iwm_init_hw failed 16
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: iwm_start_fw: Unable to init nic
iwm0: iwm_start_fw: failed 16
iwm0: Failed to start INIT ucode: 16
iwm_run_init_ucode: failed 16
iwm_init_hw failed 16
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: could not initiate scan
iwm0: could not initiate scan
```

`doas service netif stop
doas kldunload if_iwm
doas kldunload iwm7260
doas kldunload iwm7260fw
doas kldload if_iwm
doas kldload iwm7260
doas service netif start`
```
Mar 30 15:03:23 beloved kernel: iwm0: <Intel(R) Dual Band Wireless AC 7260> mem 0xf7900000-0xf7901fff at device 0.0 on pci4
Mar 30 15:03:23 beloved kernel: hw rev 0x140, fw ver 17.352738.0, address ac:fd:ce:84:65:b6
```

Something like this also doesn't work, and produces the below output
```
doas service netif stop
```
