Description
Since upgrading to 5.8, my wifi occasionally drops out, and `doas service netif restart` does not bring it back. A reboot does though.

I've tried it with each of:
# wpa_supplicant_program="/usr/sbin/wpa_supplicant"
# wpa_supplicant_program="/raven/sbin/wpa_supplicant"
wpa_supplicant_program="/usr/local/sbin/wpa_supplicant"

`doas service netif restart`:
```
iwm0: could not initiate scan

```

Something like this also doesn't work, and produces the below output
```
```
doas service netif stop
doas kldunload if_iwm
doas kldunload iwm7260
doas kldunload iwm7260fw
doas kldload if_iwm
doas kldload iwm7260fw
doas service netif start
```
